

LP Dashboard

Pick Performance Dashboard

Superior Pick Process Visibility

The LP Dashboard™ enables Lightning Pick users to easily view pick rate productivity, accuracy, throughput and other vital statistics in their order fulfillment or manufacturing operations through one 'centralized' software application.

The Dashboard's next generation GUI (Graphical User Interface) enables users to visualize real-time metric data in a variety of high-impact graphical presentations. Intuitive navigation tools arrange your valuable performance data into helpful chart and graph formats.

Simple drag and drop widgets allow Lightning Pick customers to easily configure their own unique dashboard templates. Special widgets can even enable data feeds from video cameras and the internet. So besides a management tool, some customers use Dashboard to share company announcements, weather reports or other updates with employees on LCD displays throughout the facility.

Special Features

- Drill-Down Productivity views into Facilities, Areas, Zones and Employee level data.
- View KPIs including Pick Rate Productivity, Order Accuracy, Throughput and many others.
- Utilize Drag and Drop Widgets to create your own custom views.
- View operational data in rich graphical presentations.

New in Version 6.1

Version 6.1 of Dashboard has significantly expanded features and capabilities including:

- Marquee Mode - Automatic slide-show style display of multiple user-configured Templates.
- XPS Document Display Capability - LP Dashboard now has a new widget that can display an XPS document.
- Web Page Display – Allows you to include Internet data in LP Dashboard. This includes weather, sports, stocks, company data, special announcements, etc.
- Several new Widgets that display enhanced picker productivity data.
- Additional new Pack to Light (also called Put to Light or Put to Store) specific Widgets.

Advantages

- LP Dashboard provides a 'centralized' view of all critical lightning Pick processes in your operations through a single software application.
- The Dashboard's next generation GUI features intuitive navigation for users to conveniently configure data into meaningful views based on their specific requirements.
- Continuously improve your supply chain processes with better business intelligence.
